

ROBIN TOTEM

Built around a UPN steel frame, Robin is robust and hard-wearing. Its simplicity is balanced by the use of wood in the base. The species chosen, Robinia, guarantees not only aesthetic appeal but also unrivalled durability. Robinia, commonly known as 'False Acacia', is renowned for its exceptional durability and ability to withstand the elements. Unlike other species, it does not degrade over time, retaining its elegance and strength through the seasons. It's a sustainable alternative to exotic woods, so you can choose sustainable, local and responsible signage.

Technical specifications :

Formats: A1 | A2 | A3

Height: 1400mm

Materials: Powder-coated steel with Robinia insert (class 4)

Decors : Lava enamel, ClearSign

Anchoring: on a concrete base using a base plate

Installation on FERRADIX® optional

Graphic design and installation optional.

Optional: Engraving of base

Other types in the range :

Lectern, Double Lectern, Information Sign

Please note that specifications are subject to change.

Textured colour :

Mars 2525

Black 100 sanded

Grey 900 sanded

Smooth colour :

RAL 8007
Fawn Brown

RAL 5014
Blue grey

RAL 6009
Pine green

RAL 5011
Steel blue

RAL 9005
Black

RAL 3005
Red Wine

RAL 7016
Anthracite

Dimensions (in mm) :

Robinia

The natural touch for your signage

The locust tree, also called false-Acacia, was introduced to Europe by Jean Robin, arborist to kings Henry III to Louis XIII, in the 17th century. He received Appalachian seeds from an English naturalist. Although the original tree planted at Place Dauphine has disappeared, its descendants can be seen at Square René-Viviani opposite Notre-Dame and another at the Jardin des Plantes de Paris.

Robinier du Square René-Viviani

Robinia from the Jardin des Plantes

Its characteristics

The black locust tree has a particular ability to capture nitrogen from the air and integrate it into the soil. It is therefore excellent for fertilizing and developing plantations. However, these are not the qualities that propelled him into the Empreinte catalogue.

Robinia wood is very dense, almost rot-proof. Naturally durable in use class 4, it requires no treatment. It resists insects, bad weather and sea air. It very advantageously replaces exotic species. Cultivated in France, it is considered today to be the most sustainable European wood. Its grain is straight, its veining fine, its warm yellow to olive brown color.

Like any natural product, Robinia lives. It takes on a silvery gray patina as it ages. It may have a few cracks in use (notably in the legs of the ESPAR line), without any impact on the durability of the structure.

LAVA ENAMELED

Recognized know-how for your signage

Enameled lava corresponds to a technique created by Parisian artists in the 19th century. This involves covering a lava stone with a vitrified layer. This typically French know-how is today recognized as an art profession.

Enameled lava can receive all types of illustrations and texts, which retain their vibrant colours over the years, thanks to the properties of the material itself. Very resistant, it is an ideal product for exterior signage. Enameled lava is suitable for the "panel" part. It cannot be used to create a furniture structure.

Imprint, Company of Living Heritage

This label, awarded by the Ministry of the Economy after a series of audits, rewards companies holding rare, valuable know-how and promoting the excellence of French manufacturing throughout the world. It attests to our sensitivity to the issues of conservation and enhancement of heritage.

Main Features :

Ease of maintenance

Natural product

100% recyclable

Longevity 10-year guarantee

French product

Scratch and impact resistant

Easy graffiti removal

Total resistance to bad weather

Protected know-how

Pollution resistance

Technical specifications:

Dimensions and shapes:

Thickness 15 mm Maximum dimensions: 500 x 1000 mm (min 50 x 50 mm), Weight per m²: 22 kg

Thickness 25 mm Maximum dimensions: 1000 x 2000 mm (min 100 x 100 mm) Weight per m²: 55 kg

Types of finishing:

The unprinted surface may be glossy or satin.

Maintenance tips :

Enameled lava signage is very easy to maintain:

Ordinary dirt: cleaning with water, ordinary high-pressure cleaner permitted

Graffiti: cleaning with an ordinary anti-tag product, followed by rinsing with clean water.

Clear Sign®

The solution for your signage

Registered trademark, the Clearsign technique includes its main qualities in its name:

- C** - Clarity
- L** - Lightfastness
- E** - Environment (Eco friendly)
- A** - Abrasion Resistant
- R** - Recyclable

In signage, these advantages are major. The technique is however simple. A powder-coated aluminum plate is printed and powder-coated again. The print is thus encapsulated between two very hard layers. The result is stunning, the colors vibrant, the resistance incomparable, both to shocks, scratches and graffiti.

The decorations are printed in high resolution on a wide range of powder-coated colours. The varnish is necessarily shiny. Not available in matte finish.

Technical specifications:

Finishes:

Gloss - Graffiti resistant coating

Artwork Supply :

Full size, CMYK, 300 dpi jpegs, 5mm bleed, no crop marks

Impression :

Colour printing on white surface
Colour printing on coloured surface
White printing on coloured surface

Maintenance:

Recommended cleaning products*:

Ethanol
Turpentine
Xylene

**Stronger solvents (MEK, Acetone, Nitrocellulose solvent, etc.) should be used with caution and will be the customer's responsibility.*

Please note that specifications are subject to change.

Advantage :

Not flammable

High resolution printing

Easy graffiti removal

Colour Clarity

Visual quality
guaranteed for 7
years (excluding
vandalism)

THE RECOMMENDATIONS

Maintaining your signage

To maintain your signage (all surfaces except wood), we recommend that you completely dust the surfaces approximately once a month using a dry cloth.

Secondly, clean the plates with a soft cloth soaked in household alcohol. This measure will optimize the readability and shine of your plates.

For enameled lava, occasional use of a high-pressure cleaner (apart from the joints) can help lighten the cracking and remove stains and graffiti.

For cleaning specific stains or for any other questions, contact us.
